If you ever seen Grealdon's "Steam sequence" this is that but for wikipedia this is all Wikipedia we'll be going over articles from 0 to 0-2-4 let's begin

0:
cipher is a historical name for 0
Some systems that include strings with both letters and numbers exclude 0 for confusion with "o"
The Hindu-aribic number system had symbols that could represent any number that was it times a multiple of 60… like floating pointish
The Greeks didn't use 0 as "How can not being be?"
Ptolemy used 0 to mean "a number 1 less than 1" before the Indian guy did. He used a symbol that looked like a dot with a macron eventually the macron was dropped and the dot became an ellipse
The Chinese used base 10 and independently developed a circle as their symbol for 0
It was thought in the 12th century that any number divided by 0 is ∞
Ibm invented the 0 with a dot in the middle symbol
Some airlines use a 0 with a vertical bar through it for some reason
If you multiply 0 numbers together the answer is 0
f(x)=0 is the only function to be even and odd
0%Mercury:
two albums released one English the other Ukrainian at least their titles are I didn't listen to their music
0% finance:
You pay in installments for a thing but pay more in total; but no interest unless you fail to pay.
0+1=1 (I Promise You):
An extended play created by the contestants on
